

ASSIGNMENT 3 JAVASCRIPT

ARRAYS

1. Write a JavaScript code to add an element to the end of an array using the Push method.

Example: [1, 2, 3] -> [1, 2, 3, 4]

Code: //to add an element using push method (end of array)

```
var arr1=[1,2,3];  
arr1.push(4);  
console.log(arr1)
```

Output: [1, 2, 3, 4]

Exp: Here, we start with an array containing [1, 2, 3]. The push method is used to add the element 4 to the end of the array. After adding we will get updated array, [1, 2, 3, 4].

2. Write a JavaScript code to remove the last element from an array using the Pop method.

Example: [1, 2, 3, 4] -> [1, 2, 3]

Code : //to remove elements from array using pop method

```
var arr1=[1,2,3,4]  
arr1.pop();  
console.log(arr1)
```

Output: [1, 2, 3]

Exp: Here, we start with an array containing [1, 2, 3, 4]. The pop method is used to remove the last element (4) from the array. Then we will get updated array, [1, 2, 3].

3. Write a JavaScript code to add an element to the beginning of an array using the Unshift method.

Example: [2, 3, 4] -> [1, 2, 3, 4]

Code : //to add element beginning of an array using unshift

```
var arr1=[2,3,4]  
arr1.unshift(1);  
console.log(arr1)
```

Output: [1, 2, 3, 4]

Exp: Here we start with an array containing [2, 3, 4]. The unshift method is used to add the element 1 to the beginning of the array. Then we will get output as [1, 2, 3, 4].

4. Write a JavaScript code to remove the first element from an array using the Shift method.

Example: [1, 2, 3, 4] -> [2, 3, 4]

Code : //to remove first element from array using shift method
var arr1=[1,2,3,4]
arr1.shift(0);
console.log(arr1)

Output : [2, 3, 4]

Exp: Here,we start with an array containing [1, 2, 3, 4]. The shift method is used to remove the first element (1) from the array. Then, we will get output as [2, 3, 4].

5. Write a JavaScript code to convert an array into a string using the Join method.
Example: [1, 2, 3] -> "123"

Code: //to convert an array into a string using join method
var arr1=[1,2,3]
console.log(arr1.join(""));

Output: 123

Exp: Here,we start with an array containing [1, 2, 3]. The join (") method is used to concatenate the array elements into a single string without using any separators. Then, we will get output as "123".

6. What will be the output of [1, 2, 3, 4].pop()?

Code : //output using .pop()
var arr1=[1,2,3,4];
arr1.pop();
console.log(arr1)

Output: [1, 2, 3]

Exp: The pop () method is used to remove the last element from the array, in this case it's 4.It returns the modified array after the last element is removed, so the result is [1, 2, 3].

7. What will be the output of [1, 2, 3].push(4)?

Code : //output using .push()
var arr1=[1,2,3];
arr1.push(4);
console.log(arr1)

Output: [1, 2, 3, 4]

Exp: The push (4) method is used to add the element 4 to the end of the array [1, 2, 3]. Then, the array is modified to [1, 2, 3, 4].

8. What will be the output of [1, 2, 3, 4].shift()?

Code : //output using .shift()
var arr1=[1,2,3,4];
arr1.shift();
console.log(arr1)

Output: [2, 3, 4]

Exp: The shift () method is used to remove the first element from the array, in this case it's 1. It returns the new modified array after the first element is removed, resulting in [2, 3, 4].

9. What will be the output of [2, 3, 4].unshift(1)?

Code : //output using .unshift()
var arr1=[2,3,4];
arr1.unshift(1);
console.log(arr1)

Output: [1, 2, 3, 4]

Exp: The unshift (1) method is used to add the element 1 to the beginning of the array [2, 3, 4]. Then, the modified array is [1, 2, 3, 4].

10. What will be the output of [1, 2, 3].join("")?

Code: //output using .join("")
var arr1=[1,2,3];
console.log(arr1.join(""))

Output: 123

Exp : The join (") method is used to concatenate the elements of the array [1, 2, 3] into a single string without any separators. Here, the separator is an empty string ("), the elements are combined directly next to each other. Then the output is the string "123".
